

arcLight™

wireless lighting control

The ArcLight™ wireless lighting control is built on the highly reliable ZigBee wireless communication standard, making it fully interoperable with other ZigBee compliant home automation devices. It installs just like a conventional light switch and is surprisingly inexpensive. Use the ArcRemote™ universal wireless remote to control your lights from anywhere in your home. Reduce electricity costs by monitoring your power usage. Robust mechanical and electrical design. Match any décor with standard snap-on faceplates.

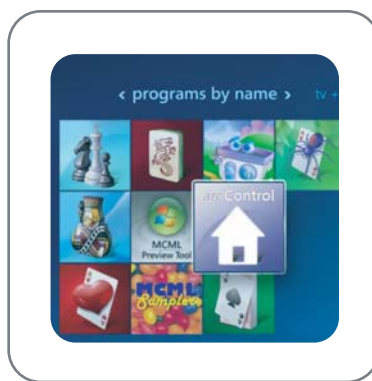

Wirelessly integrate and control your home lighting system. Manage it from your Windows Vista PC or ArcRemote universal remote control.

Lutron® faceplate pictured. Others available.

All ArcLight™ panels are networked by the ArcWay™ Home Device Gateway

Control all home lighting from a central control panel on your PC using Windows Vista...

...or through the ArcRemote™ Universal remote control for wireless home devices
